"The Acropolis"

Work Title : "The Acropolis"

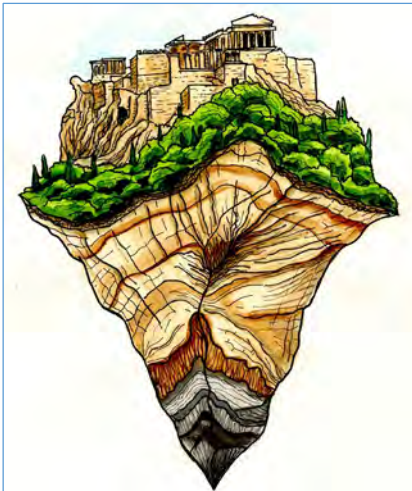

Media : watercolor on paper.

Location : Acropolis, Athens, Greece

Description:

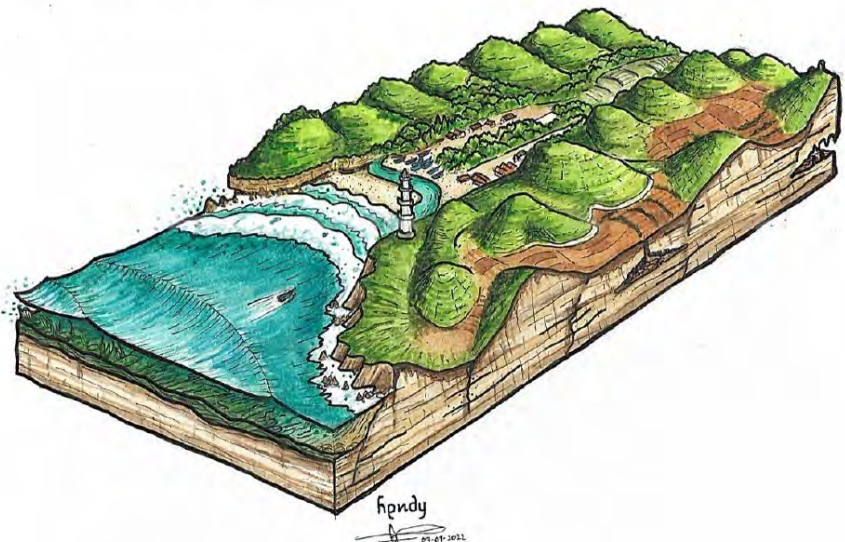

The Acropolis is an ancient temple located on the top of Limestone cliff in the middle of Athens. The Acropolis site has two main geological units from its lowermost part to the top of the rock, which is Athens Schist and Crest Limestone. The limestone of Acropolis is 30 My older than the schist it lies upon. The limestone formation was thrust over the schist by the effect of the Alpine compression movements. The contact between the lower Athens schist and the upper limestone has traditionally been a place of numerous springs and karstic caves which is very suitable for an early human habitation.

"The Baron Resurgence"

Work Title: "The Baron Resurgence"

Media: watercolor on paper.

“Predjama Castle”

Work Title : “Predjama Castle”
Media : watercolor on paper.

Location : Predjama Cave, Slovenia

Description: Predjama Castle built in front of the entrance of Predjama Cave, Slovenia. The cave itself spans four floors and is the second-longest Slovenian cave. This cave is part of the Postojna Cave System. The Predjama Castle is perched halfway up a 123-metre cliff, where it has stood for more than 800 years. It even appears in the Guinness Book of Records as the largest cave castle in the world. The castle is also connected to the legend of the "robber baron" Erasmus of Predjama. Its uniqueness has not escaped the notice of the film industry and it has frequently served as a film set. As well as visiting the castle, we recommend visiting the Cave below Predjama Castle, the second-longest show cave in Slovenia.
